

Medication Refill Reminder App

Group 2 - Taylor Gilg,
Felicity Lester, Tyler Conwell

The Problem

- Managing multiple medications with different refill schedules is challenging.
- Missed refills can disrupt treatment and cause adverse health outcomes.
- Government-regulated drugs (e.g., amphetamines, diet aids, etc.) require extra refill steps, adding to the difficulty.

REFILL MEDS
THIS WEEK!

SERIOUSLY, DO
IT THIS TIME!

TARGET AUDIENCE

Multiple
Medications

Government-
Regulated

Elderly

Caregivers

Professionals
& Students

Non-Auto
Prescriptions

Current Solutions

- ❖ **Medisafe:** Main function is to track when to take your meds
 - Includes: Refill reminders, warnings, and health data syncing.
- ❖ **Dosecast:** Similar features as Medisafe, including refill reminders, are behind a paywall.
- ❖ **Mango Health:** A free general health diary and tracking app (ex. Tracking blood glucose or water intake).

Limited Accessibility

Simple. Accessible. Efficient.

- ★ **Designed for:** People managing one or multiple medications.
- ★ **Focus on:** Convenience and easy access with a simple, stress-free experience.
- ★ **Interface:** Clear navigation, large buttons, and minimal steps.
- ★ **Notifications:** Noticeable but non-intrusive for satisfying reminders.

Project Scope

Primary Focus:

Since we have no prior experience with mobile app development, our primary focus will be on creating reliable refill reminders based on user-entered medication information and ensuring that data remains secure.

Future Goals (if time permits):

- Add dosage reminders.
- Create a calendar view for refills and doses.
- Integrate pharmacies (click-to-call, view hours, etc.).

Deliverables

- ❑ **User Flow Sketches & Diagrams** – Identify paths & refine design.
- ❑ **Effective Notification System** – Ensure timely, reliable reminders.
- ❑ **Secure Local Data Storage** – Encrypt and privately retain medication details.
- ❑ **User-Friendly Interface** – Intuitive, accessible, and easy to navigate.
- ❑ **Successful App Experience** – Prioritizing usability, functionality, and satisfaction.

Technology Stack

→ **Language:** Python

◆ Fast development

→ **Front End:** Kivy or React Native

→ **Back End:** FastAPI

◆ Fast, efficient API handling

→ **Database:** Encrypted SQLite

◆ Local storage, secure user data

→ **Push Notifications:** FireBase Cloud Messaging

Testing and Evaluation Plan

- **Testing Methodology:** Gather user feedback on the app's interface and visual design with task-based evaluations.
- **User-Centric Design:** Adjust scope of app based on user questionnaire feedback to keep users satisfied and ensure a successful product experience.
- **Success Metrics:** Measure functionality effectiveness and overall user satisfaction with the app's design and notification system using questionnaires.
